

The Captioning Solutions Company

EEG FILE-BASED SOLUTIONS COMPLETE BROADCAST AND POST AT NAB2011

File-based MPEG-2 Caption Legalizer™ and CCPlay FilePro Maximize Caption Compliance for Compressed File Workflows

NAB SHOW 2011, BOOTH # N4029: EEG (www.eegent.com), an industry leader in HD workflow and closed captioning, will display its latest file-based workflow solutions at NAB 2011. On display and ready for demonstration at their NAB booth will be their **File-based MPEG-2 Caption Legalizer™**, as well as the **CCPlay FilePro** post production caption encoding tool.

The **File-based MPEG-2 Caption Legalizer**, previewed at NAB2010, marks the first Caption Legalizer designed specifically for batch-based compressed file workflows. It ensures captioned video assets are in full compliance with CEA-708, ATSC, and CableLabs® standards.

An innovative software tool for broadcasters, post production and distribution facilities, it processes HD MPEG-2 transport streams at rates of 15X real-time, enabling quick standardization and full quality control for VOD libraries and other high throughput post production and distribution workflows. For more information, visit <http://www.eegent.com/software/mpeg-2/>,

CCPlay FilePro is a new software toolbox for post-production caption stitching that extends EEG's industry-leading CC, XDS, and AFD encoding into MPEG and MXF video file formats. CEA-708 closed captions and other ancillary data is stitched directly into the compressed video files with no re-processing of video essence and no generational loss.

Capable of performing HD caption encoding to MPEG-2 TS or MXF XDCAM assets at rates of 10X real-time or more, **CCPlay FilePro** provides maximum closed captioning efficiency through an intuitive point-and-click browser, advanced scriptable and network modes, and integration with industry-leading servers and editing suites. For more information, visit <http://www.eegent.com/software/ccplay-filepro/>.

-more-

EEG completes broadcast and post at NAB 2011. On display throughout the show will be its full line of industry-leading solutions for HDTV captioning, file-based workflows, video production and monitoring, and openGear modular systems.

###

Visit EEG at Booth # N4029 at NAB Show 2011 to learn more about its full range of solutions. Or Call S. Eric McErlain, Sales Director for EEG, at 516-293-7472 extension 102 to schedule a demonstration at the Show.

About EEG:

EEG is an industry leader in HD workflow. Based in Farmingdale, NY, EEG's reputation for innovation in closed captioning has led to a host of advanced new tools for broadcasters, content providers, and post production. Today EEG's hardware and software drives closed captioning, quality control, affiliate communications, VANC monitoring, AFD, and more. The company is also striving to lead the way in efficient Eco Friendly designs. With over 25 years of experience, EEG's customer base includes an overwhelming majority of the cable and terrestrial networks, local broadcast stations and post facilities in North America. As the distribution of video and information becomes increasingly complex, the solution for streamlining is EEG.
